Close to the key to manual massage----precise

Two-dimensional detection and location technology

Get to know you, then massage

双维侦测定位技术
先懂你，再按摩

1

Height and position detection

The positioning of the shoulder press combined with the whole back point, positioning the height of massage varies from person to person.

身高位置检测

压肩定位与全背采点相结合，定位身高按摩因人而异。

2

Detection of S-shaped curve of ridge back

3D tactile detection can adapt to the body curve changes with accurately massage

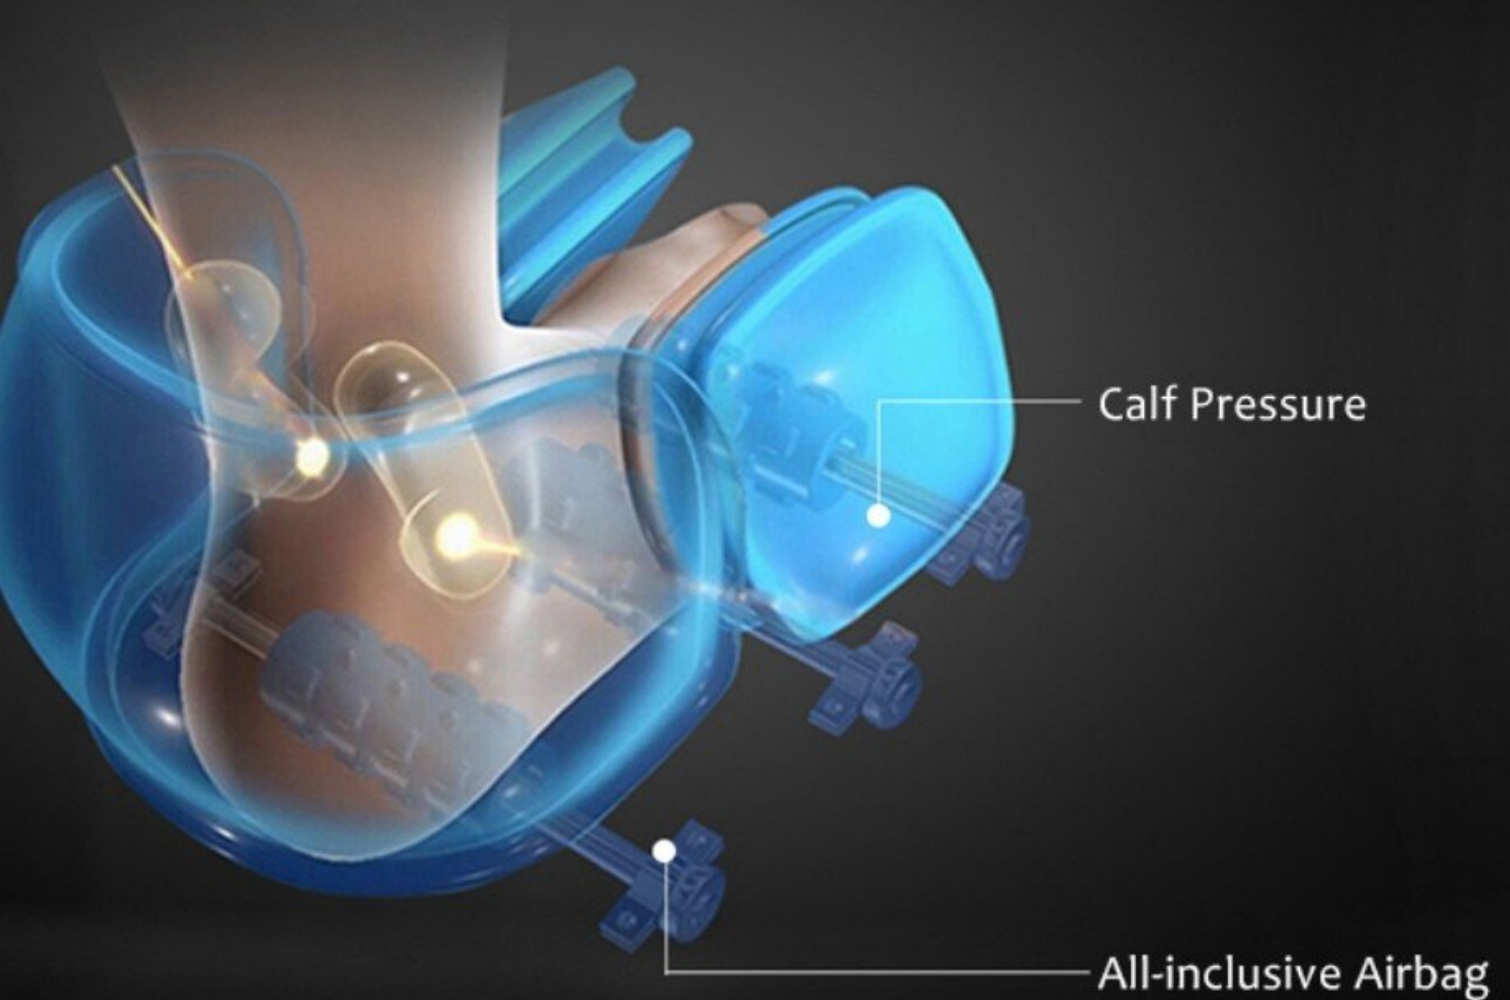

脊背S型曲线检测

3D触感式侦测，适应人体曲线变化，按摩更精准贴合。

copper core motor low noise, safe and secure use

Zero Gravity Sleep System

Once you become positioned in zero-gravity, the massage chair will assist you in finding the optimal position for your maximum comfort. Then, it performs a soothing, therapeutic massage to help you drift off to sleep

Full Body Scan Technology

Body Scan Technology provides users with the most accurate, precise massage that's personalized for your specific body size and shape. Body scans work by utilizing sensors and state of the art technology to register the size, shape, and curves of each user. This allows the chair to customize the massage to your needs and ensures the rollers are hitting all the correct points.
